Asset Accounting Policy

Strategic Reference	Objective 5; Leadership Strategy 3.5; Council reports openly and transparently on its performance
File reference	AR18/3187
Responsibility	Office of Chief Executive Officer
Revision Number	5
Effective date	April 2012
Last revised date	August 2025
Minutes reference	207/25, 088/18, 103/16, 234/15, 145/12
Next review date	August 2028
Applicable Legislation	Local Government Act 1999
Related Policies	Asset Management Policy
Related Documents	Asset Management Plans (various classes) Australian Accounting Standards Asset Accounting Manuals Internal Controls Assessment Report

1. Purpose

The purpose of the Asset Accounting Policy (the Policy) is to provide guidance, clarity and consistency regarding the treatment of capital expenditure, which will provide for greater understanding and accuracy of Council's capital requirements and depreciation expenses. The existence of this policy will assist to ensure there is a distinction made between expenditure on long-lived assets and expenditure on goods and services for immediate consumption. This is critically important in determining the cost of providing services.

2. Policy Statement

Assets shall be recognised and accounted for in accordance with Australian Accounting Standards and the details contained in this policy.

3. Definitions

"Asset Categories" – assets can be classified in three categories:

i. Renewal – the process of replacing or refurbishing an existing asset (or component of it) with a new asset (or component) that provides the same level of service as the original asset.

ii. Upgrade – the process of enhancing or improving an existing asset, either physically or in terms of its functionality, to increase its value, performance or lifespan.

iii. New – anything tangible or intangible that has economic value or provides benefits.

"Capital Expenditure" – Capital expenditure can be broken down into two categories:

i. Costs incurred in the creation of a new asset – including design costs, planning and development, compliance costs, construction costs.

ii. Costs incurred for replacement repair of an existing asset (only when the replacement or repair results in an extension of the useful life of the asset and does not include the portion that would ordinarily be periodic maintenance expenditure.

***"Carrying Amount"* -** the carrying amount is the amount at which an asset is recognised after deducting any accumulated depreciation and accumulated impairment losses.

"Cost" – the amount of cash or cash equivalents paid or the fair value of other consideration given to acquire an asset at the time of its acquisition or construction.

"Depreciation" – terminology is defined as follows:

i. The systematic allocation of the depreciable amount of an asset over its useful life.

ii. The cost of an asset, or other amount substituted for cost, less its residual value.

"Entity" – a body that carries out the functions of a business and maintains a separate legal existence for tax purposes.

"*Fair Value*" – is the price that would be received to sell an asset, or paid to transfer a liability, in an orderly transaction between market participants at the measurement date.

"Future Economic Benefits" – means the potential of an asset to contribute to Council's financial objectives by increasing its resources, service to the community and/or reducing its liabilities.

"Group Assets" – an asset that by itself does not meet the capitalisation criteria but, as part of a group, meets the capitalisation criteria. Examples of group assets are library books, office furniture and IT equipment.

"Impairment" – refers to the scenario when the carrying amount of an asset exceeds its recoverable amount.

"Maintenance" – maintenance of an asset is periodic expenditure required to ensure that the asset continues to provide future economic benefits or expenditure on non-current assets that do not meet the capitalisation criteria. Maintenance costs are expensed annually as they are incurred.

"Operating Expenditure" - operating expenditure refers to the running costs incurred in operating an asset. These costs do not preserve or extend the life of an asset and are expensed as they are incurred.

"Residual Value" - the residual value of an asset is the estimated amount that an entity would currently obtain from the disposal of an asset, after deducting the estimated costs of disposal.

"Useful Life" - the useful life is, the period over which an asset is expected to be available for use by an entity or the number of production or similar units expected to be obtained from the asset by an entity.

4. Assets

"An asset is a resource controlled by the entity as a result of past events and from which future economic benefits are expected to flow to the entity."[1]

There are three specific elements that define an asset:

i Future economic benefits – in the case of public sector entities, future economic benefits (or service potential) are the goods and services to be provided by the asset, whether or not the entity receives a net cash inflow for their provision.

ii Control by the entity - control means the ability of the entity to benefit from the future economic benefits or to restrict the access of others to those benefits.

iii Occurrence of past event – the asset must be in existence. A contract to purchase an asset does not give rise to an asset, nor does the intent to acquire an asset.

iv Assets must have a useful life greater than one year to be capitalised.

4.1 Recognition of an Asset

"An asset is recognised in the Statement of inancial Position (Balance Sheet) when it is probable that the future economic benefits will flow to the entity and the asset has a cost or value that can be measured reliably."[2]

All capitalised expenditure is to be recorded in Council's asset register (which is legislatively required), appropriately identified, described and classified. For each asset or group of assets a determination of its estimated useful life, its cost for accounting purposes and the method of periodic depreciation must be identified.

5. Measurement at Recognition

The basis for measurement of the value of an asset, upon recognition, is its cost.

"An item of property, plant and equipment that qualifies for recognition as an asset shall be measured at its cost."[3]

[1] Paragraph 49a of the "Framework for the Preparation and Presentation of Financial Statements", published by the Australian Accounting Standards Board (AASB)

[2] Paragraph 89 of the "Framework for the Preparation and Presentation of Financial Statements"

[3] AASB 116 – Property Plant and Equipment", paragraph 15:

In respect of not-for-profit entities, where an asset is acquired at no cost, or for a nominal cost, the cost is its fair value as at the date of acquisition.

6. Derecognition

The carrying amount of an item of an asset shall be derecognised:

i. On disposal, or
ii. When no future economic benefits are expected from its use or disposal.

The gain or loss arising from the derecognition shall be included in profit or loss when the item is derecognised.

7. Asset Recording

All assets, including fixed assets such as plant, equipment and Information Technology, are to be recorded with pre-numbered identification tags (physical or digital; where applicable/practical to do so) to facilitate recognition in Council's Asset Management Plans and to prevent theft. The update of Council's Asset Management Plan should be undertaken on a regular basis.

8. Depreciation of Assets

Two definitions are useful to understand the concept of depreciation. They are:

i "Depreciation is the systematic allocation of the depreciable amount of an asset over its useful life"

ii "Depreciation amount is the cost of an asset, or other amount substituted for cost, less its residual value"

Depreciation provides two key information sets for public sector entities:

i The rate at which the entity's asset base is used up; and

ii Information for the pricing of services.

In the context of asset capitalisation, depreciation is an important determinant of the current fair value of an asset. *Paragraphs 43 to 47 of "AASB 116 – Property Plant and Equipment*" provide guidance in applying the concept of depreciation to parts of assets:

43. Each part of an item of property, plant and equipment with a cost that is significant in relation to the total cost of the item shall be depreciated separately.

44. An entity allocates the amount initially recognised in respect of an item of property, plant and equipment to its significant parts and depreciates separately each such part. For example, it may be appropriate to depreciate separately the airframe and engines of an aircraft, whether owned or subject to a finance lease.

45. A significant part of an item of property, plant and equipment may have a useful life and a depreciation method that are the same as the useful life and the depreciation method of another significant part of that same item. Such parts may be grouped in determining the depreciation charge.

46. *To the extent that an entity depreciates separately some parts of an item of property, plant and equipment, it also depreciates separately the remainder of the item.*

47. *An entity may choose to depreciate separately the parts of an item that do not have a cost that is significant in relation to the total cost of the item."*

9. Materiality

The relevance of information is affected by its nature and materiality. Information is material if its omission or misstatement could influence the decisions of users or assessments made on the basis of the financial statements. Materiality depends on the nature or size of the item or error judged in the particular circumstances of its omission or misstatement. Thus, materiality provides a threshold or cut-off point rather than being a primary qualitative characteristic which information must have if it is to be useful.

10. Capitalisation Thresholds

The following table provides guidance when determining whether expenditure is both capital and material in nature.

	Maintenance	Capital
Fleet & Plant Assets	No maximum limit for maintenance expenditure associated with fleet or plant asset	Expenditure >$5,000 for individual assets, or assets that can be easily grouped.
Sealed Roads and Car Parks	Minor road patching. Shoulder grading. Line marking. Road cleaning & sweeping. General kerb maintenance.	Road patching other than minor works >$20,000 New road construction (including relevant line marking). Resealing >$20,000 Reconstruction >$20,000 Repairs to kerb & channel >$20,000 New kerb construction
Unsealed Roads	Grading. Sweeping. Scrub Clearing.	Other Treatments >$10,000
Information Technology	No maximum limit for maintenance associated with Information Technology equipment	Expenditure >$5,000 for individual assets, or assets that can be easily grouped.
Stormwater & CWMS	Minor repairs <$5,000	Pipe and structure replacement >$5,000 New pipes and structures New wetlands Purchase or replacement of pump and bore equipment >$5,000

	Maintenance	Capital
Office Furniture & Equipment	Purchases <$5,000	Expenditure >$5,000 for individual item or items which can be grouped
Jetties & Wharves	Jetty: minor repairs <$20,000	Jetty: structure replacement: >$20,000
Signs	Repairs to existing individual signs & posts	New signs and/or posts Replacement of existing signs >$5,000
Footpaths	Footpath maintenance (pothole repair, joint grinding, segment paving resetting) <$10,000	Footpath replacement >$10,000 New footpath construction
Research ,Design & Project Management Costs	All research, design & project management costs incurred on projects which have not proceeded.	Subject to the tests of AASB 136 Impairment of assets
Traffic Calming Devices	All line marking. Any maintenance to existing devices <$5,000	Any new or complete replacement of kerb, fence and component of the device New traffic islands
Irrigation	Maintenance to existing irrigation equipment <$5,000	New irrigation equipment Major repairs/replacement of irrigation equipment >$5,000
Land and Reserves	Maintenance of landscaping structures Renewal of mulch and garden beds Plants and Trees Maintenance to existing park furniture	New pavers and concrete paths New irrigation systems New park furniture Replacement of existing park furniture > $10,000
Sporting Ovals and Playing Courts	Line Marking Lawn mowing Light tower bulb replacements	Major Earthworks Court construction and resurfacing Light tower construction and replacement > $10,000
Playground Equipment	Maintenance to existing playground equipment	New playground equipment Replacement of playground equipment > $5,000
Buildings	All maintenance of building components.	Any structural addition to the buildings >$10,000 Renewal of building components

	Maintenance	Capital
Fencing	Maintenance to existing fencing <$5,000	New fencing >$5,000

11. Depreciation of Non-current Assets

All non-current assets having a limited useful life are systematically depreciated over their useful lives in a manner which reflects the consumption of the economic benefits provided by those assets. Land is not a depreciable asset. The depreciation method applied shall be the straight-line basis. Depreciation rates shall be reviewed each year.

12. Revaluations

When an asset is recognised, its value can be recognised either by the cost model or by the revaluation model. The cost model recognises the original cost of an asset less any accumulated depreciation and impairment losses. The revaluation model recognises assets at their fair value only if that can be measured reliably. If an asset is revalued, its value is the fair value at the date of the revaluation less any subsequent accumulated depreciation and subsequent accumulated impairment losses.

Indexation occurs between formal revaluations to maintain the accuracy of asset values and account for inflationary impacts.

AASB 13 Fair Value Measurement establishes a fair value hierarchy that categorises the inputs to the valuation into three (3) levels. Highest priority is given to quoted prices in active markets for identified assets and liabilities and lowest priority to unobservable inputs.

Level 1: Inputs are quoted prices (unadjusted in active markets for identical assets of liabilities that the entity can access at measurement date.

Level 2: Inputs are inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly:

a) Quoted prices for similar assets or liabilities in active markets
b) Quoted prices for identical or similar assets or liabilities in markets that are not active.

Level 3: Inputs are unobservable inputs for assets or liabilities.
Unobservable inputs are to be used to measure fair value to the extent that relevant unobservable inputs are not available, thereby allowing for situations in which there is little, if any, market activity for the asset or liability at measurement date.

Revaluation of assets will be undertaken with sufficient regularity to ensure the carrying amount of the asset does not differ materially. Revaluations of a whole asset class are scheduled to occur on a four yearly basis, but dependant on the asset class more frequent revaluations may be required.

13. Useful Lives of Council Assets

The useful lives by asset class are:

Buildings – Structure	10 to 150 years
Buildings – Other	15 to 90 years
Infrastructure	5 to 100 years
CWMS	1 to 80 years
Plant & Vehicles	2 to 20 years
Furniture & Fittings	1 to 100 years
Equipment	2 to 60 years
Other (artworks/library books)	7 to 100 years

14. Impairment

Assets that have an indefinite useful life are not subject to depreciation and are reviewed annually for impairment. Assets that are subject to depreciation are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable.

15. Land held for resale

Land held for development and/or resale is valued at the lower of cost and net realisable value. Costs include:

- the cost of acquisition, development and interest incurred on financing of that land during its development
- interest and other holding charges incurred after development is complete are recognised immediately as expenses
- land held for development as community facilities is valued at the lower of cost and net realisable value. Cost includes the cost of acquisition and development

16. Land under roads

For reporting periods commencing on or after 1 July 2008, “AASB1051 – Land under roads” came into effect. In accordance with this Standard, Council has elected not to recognise values for land under roads held as at 30 June 2008 as it has determined that there is no reliable measurement; an essential criterion for asset recognition.

From 1st July 2008 onwards all newly acquired land under roads must be recognised in accordance with AASB116 –Property, Plant and Equipment, paragraph 7 of which states that an asset should only be recognised if, and only if;

i It is probable that the future economic benefits associated with the item will flow to Council; and

ii The cost of the item can be measured reliably

A reliable method has been unable to be determined; hence land under roads will not be recognised in reporting period from 1 July 2008.

17. Capital Works In Progress

Asset accounting for works in progress (or "carry forward") involves tracking the costs of assets that are under construction or development until the completion stage is reached. Works in Progress balances will be reviewed by Council officers at pre-determined intervals (as the annual Capital Works Program allows/dictates) to ensure they are cleared no later than six (6) months after practical completion.

18. Availability/Accessibility

This Policy is available for inspection at Council's offices during normal business hours and Council's website, and will be emailed to interested parties on request (please lodge request in writing via email to council@coorong.sa.gov.au).

19. Document History

This Policy will be reviewed at least every three (3) years or more frequently if legislation or Council requires.

Version	Adopted	Minute No	Description of change(s)
1	17 April 2012	145/12	New policy
2	20 October 2015	234/15	Cyclical review
3	17 May 2016	103/16	Cyclical review
4	15 May 2018	088/18	Cyclical review
5	19 August 2025	207/25	Minor formatting throughout the policy document to align with corporate policy branding Definitions refined (ie. new terminology inserted and current terminology amended) Minor changes made to the physical recording and/or recognition of an asset Capitalisation thresholds in clause 10 amended Clause 13 – Useful Lives of Council Assets consolidated into a holistic listing with useful lives now represented as a span of years

			New clause (17) inserted regarding treatment of Capital Works In Progress
