2020 Mitigation trial Coombe - Results

Mean effects of press wheel tyre type on established plants/m² at the 2 sites.

Press wheels \ Trial site:	Flat	Rise
110 mm tyre	140 ^a	103 ^c
150/80 mm tyre	126 ^b	88 ^d
80 mm tyre	123 ^b	85 ^d
$LSD_{5\%} = 12.1 \text{ p/m}^2$		

Improved grazing production on non-wetting sands

Mel Fraser – 0427 084 569

Melissa.Fraser@sa.gov.au

Aim

To increase our understanding of opportunities to improve *pasture and red meat production* by ameliorating sandy *soil constraints*.

How?

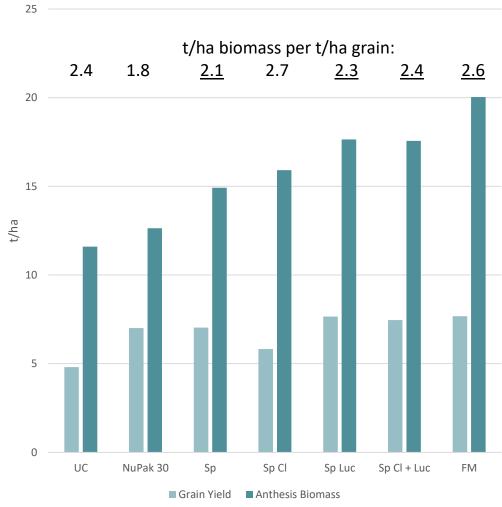

By demonstrating technologies and techniques used to improve productivity in cropping systems on sandy soils.

When?

Jan 2021 to June 2026

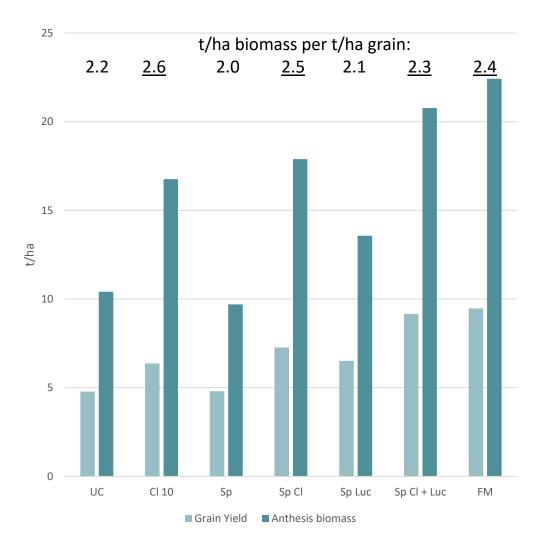

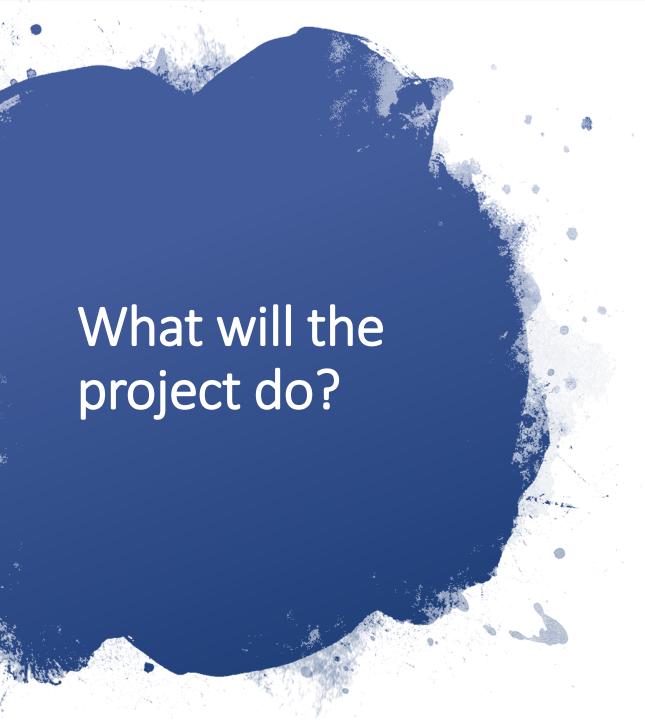

5 year Cumulative Production – Karoonda (260mm)

4 year Cumulative Production – Cadgee (385 mm)

- Three demonstration sites with treatments applied that address identified constraints
 - measure the impact on soil condition, pasture quality and quantity and carrying capacity
- Facilitate peer to peer learning
- Prepare case studies and economic analysis
- Develop a decision support tool to assist technology uptake
- Measure change

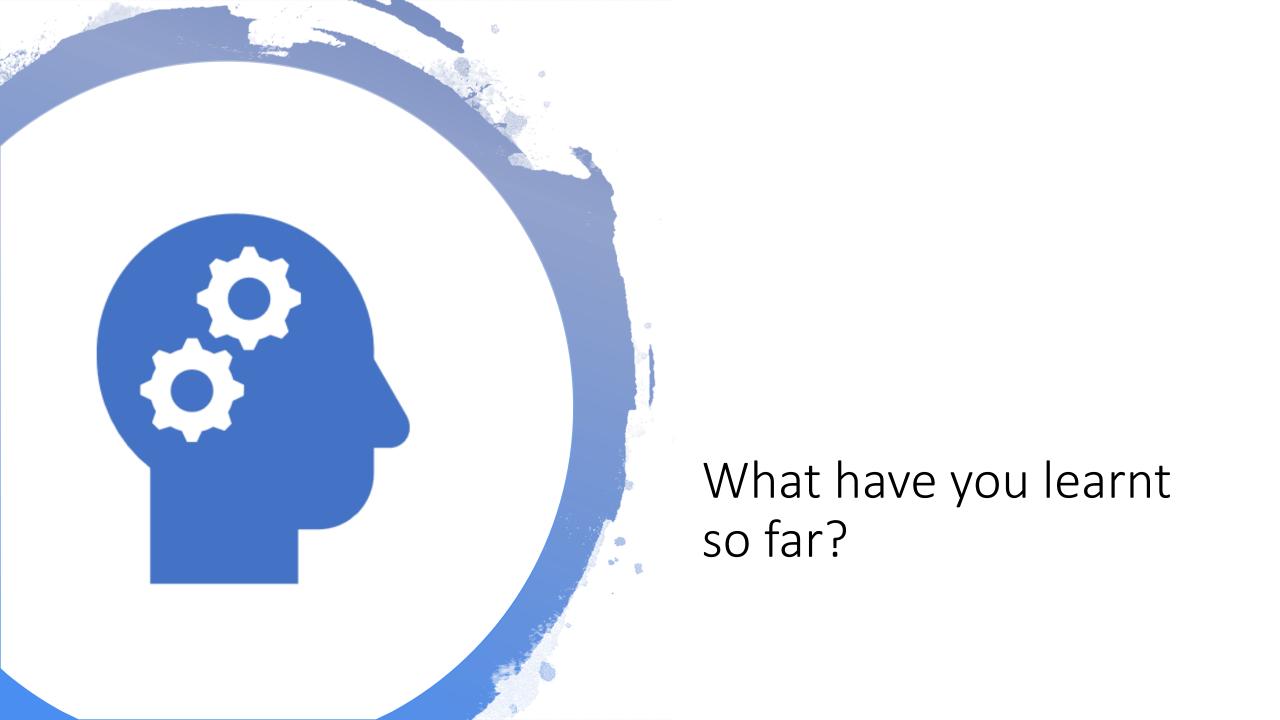

What are your constraints?

What would you like to demonstrate and learn?
